

1: Sign up at: <https://wiki.terravolt.co.uk/register/>

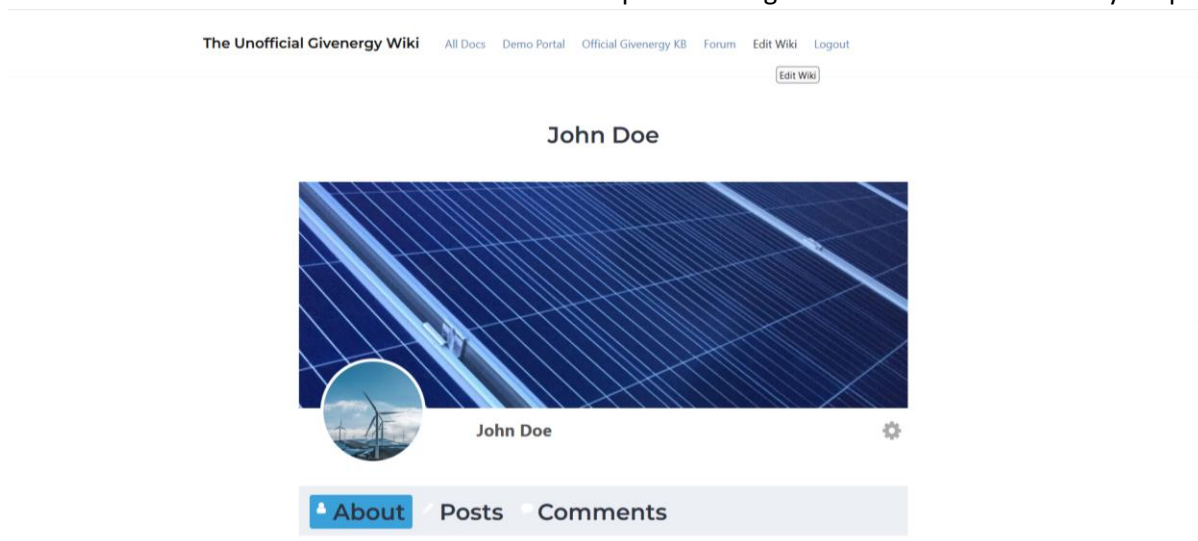

The image shows a registration form titled "Register". It contains the following fields: Username (filled with "demo"), First Name (filled with "John"), Last Name (filled with "Doe"), E-mail Address (filled with "demo@terravolt.co.uk"), Password (filled with "*****"), and Confirm Password (filled with "*****"). At the bottom, there are two buttons: "Register" (blue) and "Login" (grey).

Then you'll need to wait for me to approve you so may be a while!
You'll get an email when your approved.

2: Login: <https://wiki.terravolt.co.uk/login/>

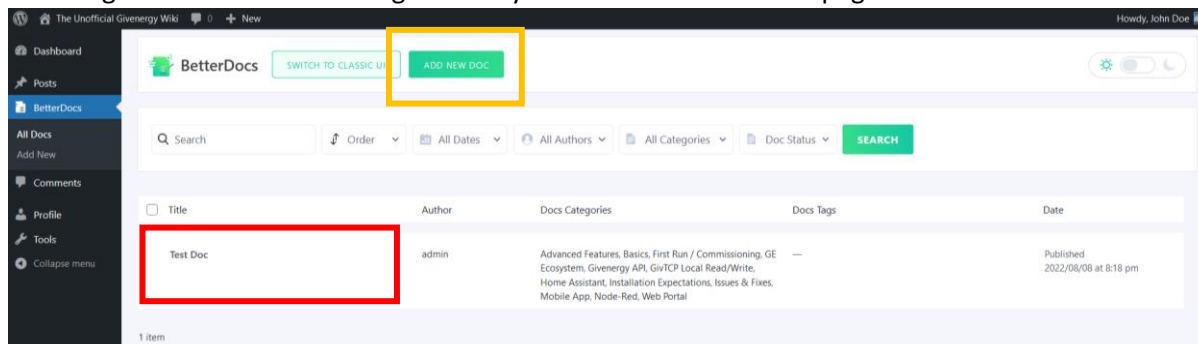

Adjust your User Profile as little or as much as you like.

To create Wiki articles click the "Edit Wiki" in the top menu or "go to Wiki Editor" button on your profile.

3: This takes you to the Wordpress Dashboard.

I'm using "Better Docs" to manage this so you should default to this page:

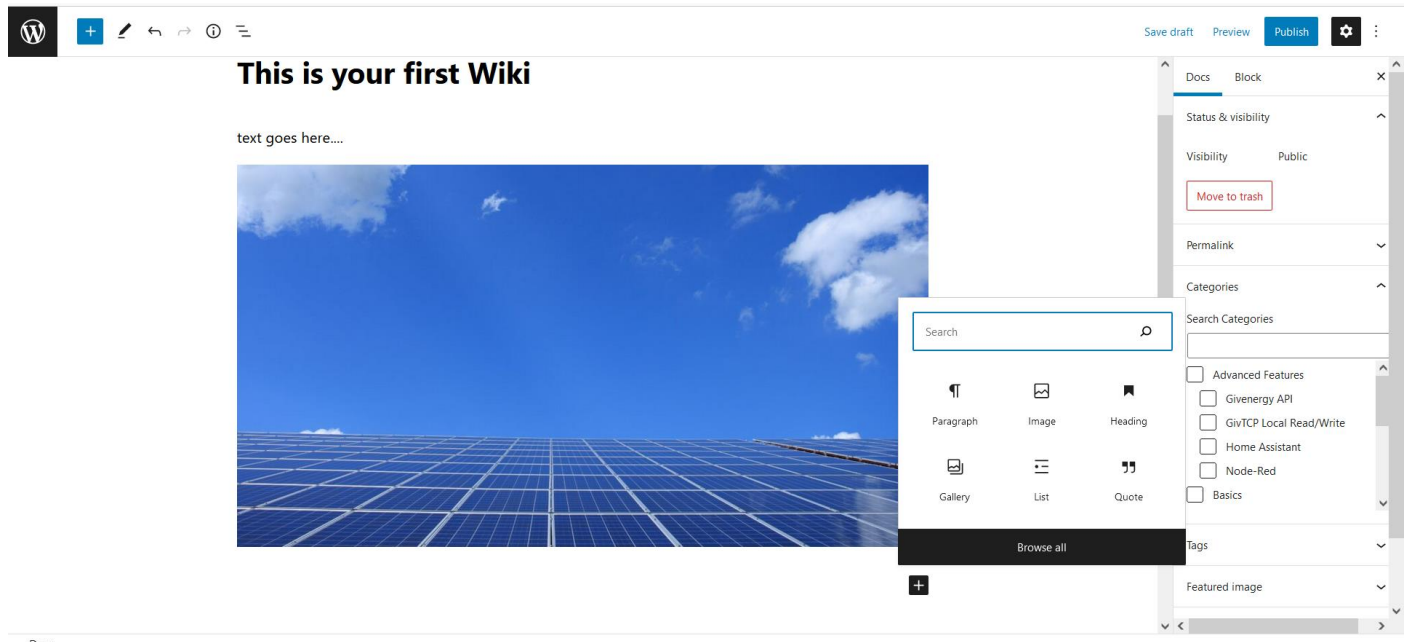

You can either **edit existing** (if they were created by you) or **create a new one**.

4: Create a new document in the WordPress Editor. You should get a short tutorial on the first one but basically everything works in blocks. Don't worry if it looks a mess or you can't align things, I can sort once you submit it.

The title of what you want the page to be called is at the top ("This is your first Wiki")
The rest of the text goes below.

Anything fancy then click the "+" icon to get a bunch of other things you can add in like Images and so on.

Once your done, click somewhere in the page (that you've not written on) and on the right-hand menu click the "Docs" tab" then select a category for whatever you've written (if none fit then leave it & I'll sort something). **It can lag a bit loading the categories up – you may need to wait.**

Once you're done click Publish – It then goes to me for a review / tweaks.
To save for later click "Save Draft"
